Lahore, Pakistan | 📞 +92 306 096 2054

PROFESSIONAL SUMMARY

Software Engineer with production experience in Android application development and hands-on expertise in building agentic AI systems that automate real engineering and business workflows. Designed and deployed a multi-agent AI system that automates the full ticket-to-PR software development cycle, currently running in production. Skilled in Python, LangGraph, LangChain, CrewAI, AutoGen, and the OpenAI Agents SDK, with browser automation (Playwright, EgoLite) and REST/GraphQL API integration. Passionate about applying agentic AI and workflow orchestration to solve real business and personal automation problems, backed by a strong foundation in scalable Android application architecture.

TECHNICAL STACK

AI & Automation: AutoGen, LangGraph, Langchain, CrewAI, OpenAI Agents SDK, Agentic AI, LLM Orchestration, n8n, Prompt Engineering, Structured Outputs, Multi-Agent Systems, Function Calling & Tool Execution, PlayWright, EgoLite

Programming Languages: Python, Kotlin, Java, JSON

Automation & Integration: REST APIs, GraphQL (Apollo Client), API Integration, Webhooks, JSON Processing

Android Engineering: Jetpack Compose, Multi-module Clean Architecture, MVVM, Dagger Hilt, Room DB, Retrofit, Apollo Client (GraphQL), Flow & Coroutines, Firebase

Tools & Development: Git, GitHub, Android Studio, VS Code, Cursor, Codex

Currently Learning: Selenium, BeautifulSoup, AI Workflow Optimization

PROFESSIONAL EXPERIENCE

Dev Entity

Okara, Pakistan

Software Engineer (Android & AI Workflows) — *March 2025 – Present*

- Contributed to a flagship Android application with 5M+ downloads on Google Play Store, delivering production-ready features and performance improvements.
- Developed scalable applications using Jetpack Compose, MVVM, Clean Architecture, and multi-module architecture across 25+ feature modules.
- Integrated REST and GraphQL APIs to build reliable data flows, business logic, and backend communication for enterprise workflows.
- Collaborated with cross-functional teams to deliver new features, optimize existing workflows, and resolve production issues.
- Implemented reusable UI components, feature flags, and performance optimizations to improve application maintainability and user experience.
- Contributed to AI-driven initiatives by integrating conversational APIs and exploring workflow automation to improve operational efficiency.

PRODUCTION & PERSONAL APPLICATIONS

CricScore

2026

Android Sports Application (Live on Google Play Store)

- Developed and published a production-ready Android application on the Google Play Store.
- Built using modern Android architecture with Jetpack Compose, MVVM, and REST APIs.
- Focused on performance, maintainability, and a smooth user experience across production releases.

KinHealth

2026

AI-Powered Healthcare Application (Production Ready)

- Developing an AI-powered healthcare application integrating on-device and cloud-based AI capabilities.
- Working on LLM integration, intelligent healthcare workflows, and medical document understanding.
- Building scalable Android architecture while exploring on-device AI inference and modern AI frameworks.

AI AUTOMATION PROJECTS

Android AI Dev Assistant (Ticket-to-PR Pipeline)

CrewAI • Python • Multi-Agent Systems • Antigravity CLI • Git Automation • Android

- Designed and built a production AI system that automates the full software engineering workflow, from a GitHub/Jira ticket to a review ready PR (Pull Request).
- Architected specialized agents for ticket analysis, codebase investigation, root cause identification, and automated fix application using Antigravity CLI as the code editing engine.
- Added device-level QA automation with Agent Device, agent reproduces the issue and validates the fix on a real device before finalizing.
- Integrated Git tooling to auto generate PRs with structured summaries (files changed, root cause, fix rationale).

Virtual University Quiz Study Assistant

LangGraph • Python • Playwright • Browser Automation • LLMs • Web Scraping

- Built an autonomous agent that automates quiz tracking, retrieval, and completion on VU's LMS solving a real personal workflow problem as a Virtual University Student.
- Used Playwright to log in, navigate the LMS, and scrape quiz content book wise into structured Markdown.
- Added email monitoring to detect pending quizzes and auto trigger the agent within the valid attempt window.
- Built an LLM driven node that reads live quiz questions and submits correct answers via Playwright.
- Implemented as a stateful LangGraph workflow (nodes/edges, checkpointing) for reliable, multi-step browser sessions.

AI Job Hunt Automation

CrewAI • Python • Multi-Agent Systems • LLMs • REST APIs • Structured Outputs

- Designed a multi-agent AI job automation platform covering CV analysis, job matching, and application material generation.
- Architected specialized agents (CV analysis, job discovery, compatibility scoring, cover letter generation) with LLM orchestration and structured JSON outputs.
- Integrated external APIs to research and validate job listings, generating transparent, actionable candidate reports.
